

## New Cencorp Odd-Form 1000 EVO – #1 in Through Hole Component Assembly

The demand for odd-form projects has been booming in 2015 after the introduction of the new 1500 OF at the end of 2014. Our new 1500 OF has been very well received at the global markets.

**Now Cencorp takes the next step by officially releasing Cencorp 1000 OF EVO for American markets at IPC APEX 2016 show at booth #2810**

An upgraded version of the popular Cencorp 1000 OF is now available. Following the success of Cencorp 1500 OF, we have decided to upgrade the control system and user interface of Cencorp 1000 OF to meet the latest demands set by our customers.

Cencorp 1000 OF EVO is a reliable choice equipped with active clinching unit and flexible feeder capacity as default whenever looking for more production capacity or replacing manual work processes in cases where Cencorp 1500 OF's additional feeder capacity would not be required.

Cencorp 1000 OF EVO offers a full range of feeders to provide the highest flexibility and best price/performance ratio in odd-form component placement.

Equipped with extensive software options covering on-line CAD import, MES connectivity and traceability it meets the toughest quality demands in electronics industry today. Flexible machine configuration with dynamic programming features will cover your ever changing production needs for years to come.
