

Agfa Launches New Flexible Digital Legend Ink at IPC APEX EXPO 2016

March 1, 2016

Agfa supplies imaging solutions for the production of high density interconnect PCB's. Being the number one phototooling film supplier, Agfa now offers a digital alternative to the traditional analogue process.

Based on Agfa's thorough know-how in inkjet printing, a range of UV curable inks for the production of printed circuit boards has been developed. The DiPaMat assortment includes a line of legend inks for rigid boards. There is also a white version, DiPaMat FWWh01, for flex substrates, now newly available.

An etch resist is commercially available since end 2015. It can achieve L/S down to 75 microns and is compatible with the existing etch and strip chemical baths. For more info, please come and see us at Booth 942 or contact dipamat@agfa.com
