

## Mid-South Engineering Overview

April 25, 2019

Mid-South Engineering is a full service, consulting engineering firm that provides a broad range of professional engineering services. Our multi-disciplined staff has served state and local governments as well as industrial and commercial clients with a particular expertise within the building products industry. Mid-South is an Arkansas based corporation with offices in Hot Springs, Arkansas, Cary, North Carolina, and Orono, Maine.

Mid-South Engineering was founded in 1969 by four engineers with a common vision – to be a complete engineering service provider focused on total dedication to the client. The path to their goal was simple: work with good clients, select and train good employees, delegate authority, and allow room for the proper execution of the job.

Today, Mid-South's path remains the same. Our team has successfully provided engineering, project development, project management and construction services for over 8,000 projects. Despite a change in ownership in 2017, we still operate as we have for the past 50 years, especially in regard to project execution – with the client in mind. While our new ownership structure allows us to provide engineering services on USNR turn-key projects, we remain a separate corporate entity and are committed to provide independent consulting and design services to our clients who do not want a turn-key installation.

Mid-South recently received three design awards at the 2019 American Council of Engineering Companies/Arkansas Chapter Engineering Excellence Awards. A sawmill project designed by Mid-South took first prize in two categories – Large Special Projects and Large Structural Systems. Additionally, Mid-South took home the award for the “Grand Conceptor” which is the overall project of the year award.
