

VISM SPD FlipDot with Picatinny QR, KeyMod, and M-LOK Mount (VDBSOLFLIP)

New for 2018 is an addition to the VISM by NcSTAR SPD line-up. Introducing the SPD FlipDot. This new reflex sight utilizes the same dual power source technology as our original Solar Dot Sight. When used out in the sun the solar panel will power the red dot, and will automatically turn on when the spring loaded lens is deployed. A secondary battery power source can be engaged in low light conditions by using the side on/off illumination control buttons. The SPD FlipDot also uses a KPM modular triple mount with a QR Picatinny mount, and a KeyMod™ & M-LOK® mounting plate system. Backed by the NcSTAR Lifetime Limited Warranty. Visit us at Booth 805 for more details.
