#### **Mesa Tactical Now Shipping the new LEO® Gen II Telescoping Stock system for the Beretta 1301 semi-automatic shotgun.**

Reno, NV- Mesa Tactical is now shipping the **LEO® Gen II Telescoping Stock** adapter and pistol grip system for the Beretta 1301 semi-automatic shotgun, made specifically with law enforcement in mind. The LEO Stock adapter system is designed to allow shooters the ability to fit AR style collapsible stocks and pistol grips onto their shotguns, while allowing use of open or bead sights. The versatile telescoping stock adapter system can be fitted with a standard AR-15 grip and telescoping stock, which enables tactical operators to instantly adjust the length of pull of the telescoping stock in order to accommodate differences in individual body sizes or use of body armor.

“We wanted to offer a versatile shotgun stock that law enforcement could count on in the most extreme situations,” said Lucy Espinoza, COO of Mesa Tactical. “We are proud to continually deliver new and innovative additions to our **LEO® Telescoping Stock** adapter and pistol grip line in order to meet the changing needs and wants of law enforcement professionals or recreational shooters. We remain dedicated to developing the finest products possible.”

With Mesa Tactical’s telescoping stock systems, the shotgun’s factory stock is replaced by an investment cast aluminum adapter, to which standard AR-15 grips and telescoping buttstocks can be reliably attached. While the High-tube stock systems include a built-in Picatinny rail for sights or optics, LEO

stock adapters provide a lower stock elevation allowing the use of iron sights or the front bead. All Mesa Tactical stock adapters incorporate multiple sling attachment methods.

The LEO Gen II Telescoping Stock Adapter for the Beretta 1301 semi-automatic shotgun is the first of Mesa Tactical's "Generation II" LEO adapters. The LEO adapter's second generation has been completely redesigned for increased comfort, superior handling and configuration versatility:

- The new adapter is slightly shorter and more compact than the earlier LEO adapters.
- The pistol grip has been angled forward several degrees, similar to the angle of an M1911 pistol grip, to provide more space for the webbing of the operator's thumb above and behind the grip.
- The enhanced grip angle allows the use of highly comfortable beavertail AR-15 grips such as the ERGO Grip (which included the complete LEO Gen II Stock Kits).
- The LEO Gen II Telescoping Stock Adapter end plate engages the adapter low on the sides instead of at the top, so operators are less likely to come into contact with it under recoil.
- All LEO Gen II Telescoping Stock Adapters include Mesa Tactical's innovative (and widely copied) pocket hook loops and sling loops.

Produced exclusively by Mesa Tactical, the LEO telescoping stock system has been field tested through over 10 years of combat experience by SWAT, Special Forces, federal agencies, and other armed professionals. Lucy Espinoza, Mesa Tactical's COO, commented that Mesa Tactical is "extremely pleased to be satisfying the strong consumer demand for this product. We are excited to be able to offer yet another reliable, accurate, and durable pistol grip system to the U.S. market."

The LEO adapter is available in two types of kits, adapter kits or complete stock kits. Mesa Tactical's upgraded versions include a hydraulic recoil buffer which replaces the standard receiver extension tube normally used with AR-15 style telescoping stock assemblies. The recoil buffer is manufactured for Mesa Tactical by Crosshair Recoil Buffers. The Crosshair buffer is a recoil reducer designed for professional operators who require optimum accuracy and control. Notices will be circulated to customers on the waiting list for the product this week.

### **LEO Stock Adapter Product Features:**

- Adapts AR-15 style buttstocks and pistol grips for use with Remington 870, Mossberg 500/590 and Beretta 1301 shotguns.
- Stock adapters are investment cast aircraft grade aluminum, CNC machined and powdercoated black with a tough, chemical resistant finish.
- Adjustable length-of-pull (LoP) to fit shooter's stature or for use with body armor and other equipment.
- Optional Crosshair™ Hydraulic Recoil Buffer reduces felt recoil by up to 70%.
- Gives the shotgun similar handling characteristics to the AR-15.
- Collapsible stock makes shotgun easier to stow, transport and deploy.
- Pistol grip configuration allows increased control and user comfort.
- Sling attachment points included.
- Optional SureShell® aluminum carriers can be added to the M4 Carbine buttstock.
- No gunsmithing required.
- MSRP \$105-\$340.

All Mesa Tactical products are designed in Reno, NV and manufactured in Orange County, California, USA. Mesa Tactical has a lifetime warranty and is hand built in the USA using high-grade precision parts.
