## Rosco Manufacturing's new 9mm barrels focus on Defensive and Competitive shooting needs.

October 18th, 2017: Rosco Manufacturing, a proud American manufacturer of high quality gun barrels, is proud to announce the launch of their new 9mm Bloodline AR platform barrels. The barrels are a product line extension to the hard use [Bloodline series](#) that Rosco just recently introduced.

The new 9mm barrels were designed with the current end users' needs in mind. The 9mm AR has recently been forced to evolve to meet present needs of size constraints, heavier self-defense ammunition, and suppressor use. The new-found resurgence in the 9mm AR platform has become so popular that the USPSA has even opened a Pistol Caliber Carbine (PCC) division. That is why Rosco carefully planned out the specs of these barrels to meet these needs head on.

Rosco, while listening to the voice of their consumer recently unveiled the 9mm barrels in 5.5", 7.5", and 14.5" lengths. Size was an important topic to cover for folks that want to build a smaller platform for self-defense or to be used primarily with a suppressor (and keep the overall size to a minimum). The PCC friendly barrels feature a perfect length to weight ratio for the competitive shooter to have the extra edge. The barrels also feature a 1/10 twist to help support heavier defense and subsonic loads (while still working perfectly with standard ammo).

***"We are fortunate to have great customers that tell us what they would like to see. It is our job not only to listen, but to create an everlasting product for them to enjoy"***— Gabriel Cabrera, Marketing & Sales Director for Rosco Manufacturing.

All Rosco 9mm barrels feature a 4150 CMV steel blank which is then rifled using our proprietary "Rifling and Polishing method" which produces a lapped smooth surface before final Salt Bath Nitride treatment is applied. All barrels are also Air Gauged (Chamber, Bore & Groove) and checked for other multiple points of failure in our in-house QC department before they are shipped out to the consumer. Barrels come in 5.5", 7.5", and 14.5" lengths while featuring a 1/10 RH twist. MSRP starts at \$105 and is immediately available for purchase at [www.RoscoManufacturing.com](http://www.RoscoManufacturing.com)
