FOR IMMEDIATE RELEASE
January 23, 2018

DRAGOON 7.62 CQB ALL TITANIUM SUPPRESSOR

Lightest and Smallest Serviceable .22LR to .308 Win. Rifle Suppressor in the Marketplace

Glen Rock, PA, January 23, 2018– Freedom Armory Machine Works is proud to introduce the revolutionary Dragoon 7.62 CQB Rifle Suppressor configured in a Quick Detach (QD) configuration utilizing Total Breakdown Technology (TBT).

“We always get excited about exhibiting at the Shot Show. With so many of our customers and future customers attending the show, we expect a tremendous reception of our latest Titanium Rifle suppressor,” says Scott Morris, Freedom Armory President

In a market where heavy, welded, non-serviceable designs are the norm, the Dragoon distinguishes itself with an all Titanium takedown design. The Dragoon is machined from solid Titanium Bar Stock eliminating any weld/failure points and creating an extremely durable and lightweight suppressor that can be serviced down to the piece parts with common tools. But if that is not enough the sound reduction across its entire caliber range is truly astounding for its 7.5” length, 1 3/8” diameter and 11 oz. weight, making it a true industry leader.

Our customer Bob said it all, “this is the only rifle suppressor I need, it will cover my needs from .22LR thru the .308 Win. caliber rifles I have and I won’t get tired of carrying it around.”

Freedom Armory Inc was formed in 1992 with the intent of creating a full service premier training, shooting, retail firearms and Gunsmithing facility. Over the past 25 years we have morphed from a modest 1000 sq. ft. retail facility to the current 23,000 sq. ft. state- of- the- art operation. Twenty-two years ago, Freedom Armory became a Class III dealer selling silencers, machineguns and short barreled rifles. As a Class III dealer, the thought of starting a manufacturing division that would have as its core objective the **reinvention of the sound suppressor** became increasingly attractive. As the evolution of suppressors in the marketplace unfolded, we had a gut feeling that it could be done better.

Freedom Armory Machine Works

In December 2012 the idea that started as a belief and dream was launched into a new division called Freedom Armory Machine Works. In this short time, what many said was impossible has been accomplished. Facilities have been built and expanded, highly skilled machinist/designers/engineers have been hired, top end CNC equipment and software, selected and integrated into our proven unique **ALL TITANIUM** design. Our extensive design, prototyping and testing has resulted in manufacturing a complete line of rimfire, centerfire pistol and rifle suppressor designs, from 22 cal. all the way to 338 Lapua Magnum.

Our entire line at FA Machine Works has achieved Patented breakthroughs in Gas Indexing Technology (GIT), baffle design and Total Breakdown Technology (TBT).
