

MOHOC® Cameras becoming the video camera of choice for Tactical Operators

January 2018

Game-changing MOHOC® Cameras, the first helmet cameras to be custom-built for operational use, continue to be deployed with Law Enforcement Teams and Armed Forces around the world.

Law Enforcement Agencies and Military throughout the US, Europe, Asia Pacific, and South America placed contracts in 2017, adding to a rapidly expanding number of countries deciding MOHOC® Cameras are the helmet camera of choice for their personnel when on training exercises and in theatres of operation.

Unlike ordinary sport action cameras MOHOC® Cameras have a unique, incredibly low profile form-factor which matches the shape of a helmet for secure, snag-free fitting. They have simple, easy-to-use controls and come fully ruggedized with an IP68 rating, waterproofing to 10m and are drop-proof to 2m. MOHOC® Cameras record high quality 1080p HD video and 12 MP photos and are available in both Visible Light and Infrared models.

A range of accessories have been developed to increase the capabilities of MOHOC® Cameras. An easy-fit replacement door enables the camera to be 'hardwired' for continuous power supply and live video streaming by WiFi or HDMI and relay to command over tactical radios or cellular networks. A K9 harness provides dog handlers the capability to see exactly what their dog detects. And an easy-to-use iOS and Android app allows users streaming, playback and recording control of their camera.

Visit the MOHOC® Cameras team at Booth #8108 for a demonstration of these revolutionary cameras or contact Eric Dobbie, Vice President of US Sales for more information.
